## \*\*\*\*\* INTERIM ANALYSIS \*\*\*\*\*

On August 19, 2020, we reached 530 participants. As per our protocol, this is the target sample for our second interim analysis. Data for patients enrolled up to that date must be entered in the database before September 16, 2020

**Please ensure that all data are entered and queries resolved so that the second interim analysis can proceed.**

### LATEST NEWS

#### Data Entry Deadline

The next round of payment is planned in September, so we would like to inform you that the **deadline for data entry is September 4, 2020**. All forms must be 100% complete and all queries resolved to get the per patient fees.

### ENROLLMENT UPDATE

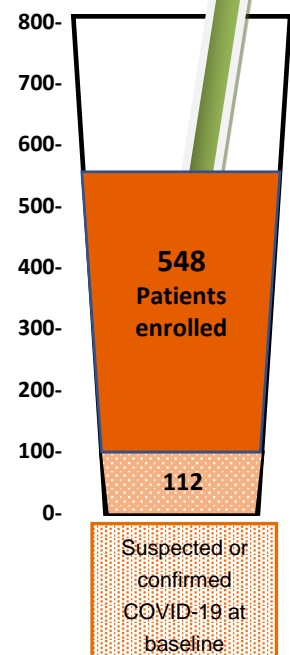

There were 34 patients enrolled into LOVIT in August.

The TOP 3 enrolling sites for August 2020 are:

- ① **Ottawa General Hospital: 9**
- ② **Kingston HSC, Hamilton General Hospital, and CIUSSSE-CHUS: 4**
- ③ **Sunnybrook HSC: 3**

#### Glucose Measurement with the Statstrip Glucometer – Error Code E-9

If the Nova Biomedical's StatStrip glucometer indicates an error code E-9, it means that the blood sample collected and put on the strip cannot be measured. The glucometer analyses the blood sample before proceeding to the glucose measurement. When it detects something abnormal, the glucometer will indicate an error instead of giving a false glucose value. When the error code E-9 happens, you must stop using the glucometer and use the core lab infrastructure or the point-of-care ABG machine that has been validated in the setting of high plasma concentrations of vitamin C for glucose measurements.
