

## CONGRATULATIONS!

On February 21, 2020, the LOVIT Data and Safety Monitoring Committee met and considered the first interim analysis. They suggested that the trial should continue as planned. They were particularly impressed by the recruitment rate as well as the quality and timeliness of the data.

Thank you. We LOV(e) working with you.

### Recruitment as of March 1, 2020

**Although February is the shortest month of the year, it has been our best month so far with 37 patients enrolled!**

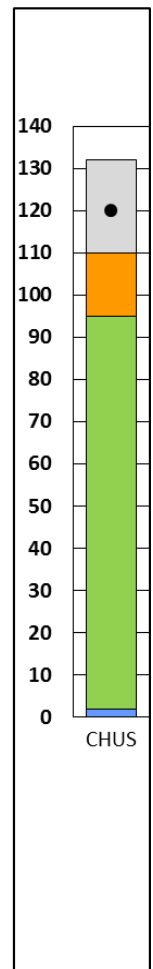

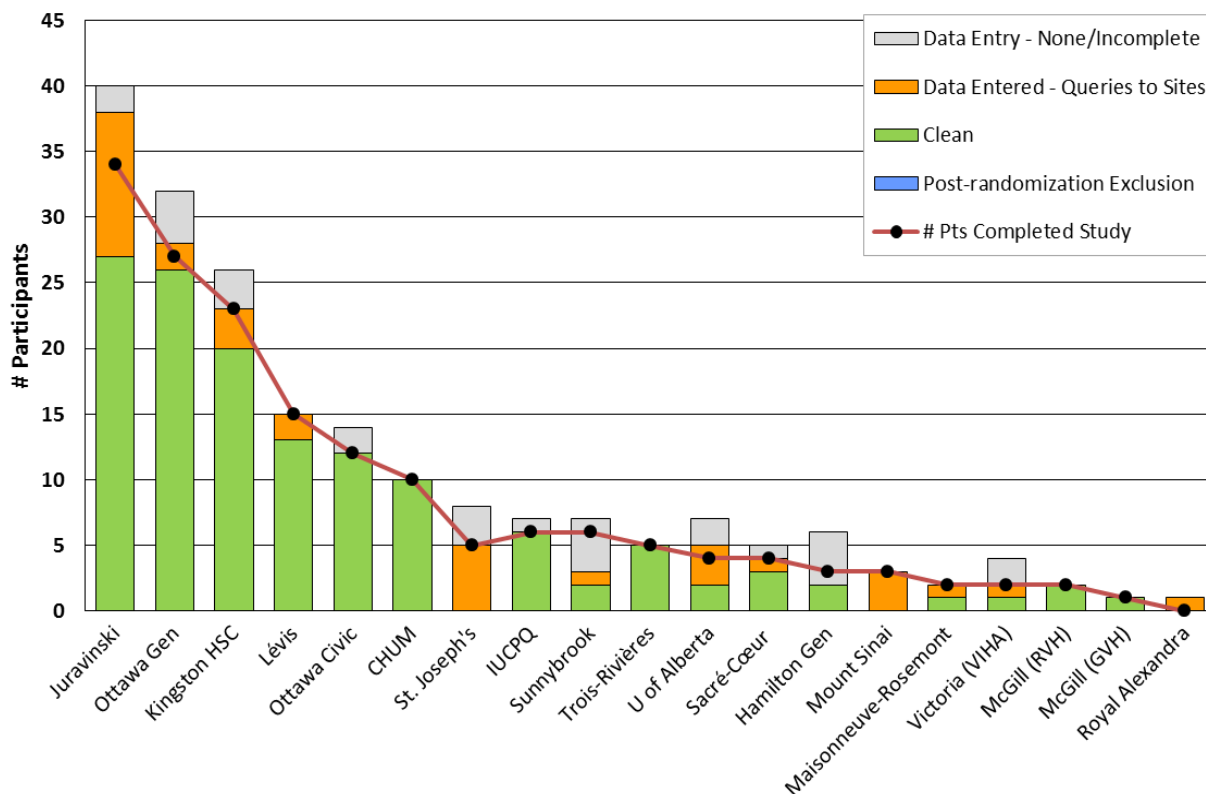

**Our TOP 3 Enrolling Sites for February 2020:**

- ① CIUSSS de l’Estrie - CHUS: 10
- ② Juravinski Hospital: 6
- ③ Ottawa General Hospital: 4

**60% of the sites reached the target of 1 patient per month.**

**Data Validation Summary by Site (as of March 1, 2020)**

Thanks to Michelle Kho for sharing her model of this graph with us.

### **Processing of Samples**

Please be sure to keep blood and urine samples on ice during the entire processing period. Once collected, Vacutainer tubes must be kept on ice even after centrifugation (except the yellow one that must stay at room temperature for the first 30 minutes and then be kept on ice). Tubes should remain on ice during the time you transfer blood and urine into cryovials, and the cryovials should remain on ice until they are put in your  $-80^{\circ}$  freezer.
